Sportdor®

STRONGDOR
SECURED BY *steel*

Sportdor - Sport England have been recommending the addition of rebound panels on steel doors since 2012. Specifically designed for use on sports hall emergency exits, these specialist doors protect hall users from impact injury with prominent door furniture. Sportdor offers flexible hardware solutions based on the bespoke design. These steel doors aim to meet specification for multiple application in different locations.

Sport England and Sport Scotland recommend the addition of rebound panels on steel sports hall doors.

Sportdor[®] Specifically designed for use on sports hall emergency exits

Sport England have been recommending the addition of rebound panels on steel doors since 2012. Specifically designed for use on sports hall emergency exits, these specialist doors protect hall users from impact injury with prominent door furniture.

In their Sports Halls design guidance publication (please see below), Sport England advise that:

"Flush doors, especially those with panic bolt mechanisms, are often difficult to get right and consideration should be given to using metal frames and procuring as a single source supply item (like an engineered window)."

"External escape doors must be panelled out to line through with the wall surface. The lower section can then form part of the five-a-side football rebound zone (1.21m high along walls) and a flush facing is essential for overall safety."

Sport England and Sport Scotland recommend the addition of rebound panels on steel sports hall doors.

Over time, as the guidance is taken up, these rebound panels are becoming more popular and are being specified on both new build and refurbishment projects. Our standard Steeldor range can easily be modified to comply with the recommendation and is currently being used successfully in sports facilities across the country.

Full details of the Sport England recommendations for sports hall design can be found on their website. You can download the guidance document from the following page.

Recommendations for sports hall emergency exit doors from Sport England

(taken from their Sports Halls design and layout guidance publication 2012)

Sports hall walls should be detailed for safety and without hazardous projections. Flush surfaces should extend to 2.0m minimum, preferably to 2.7m above.

NOTE: Modifying a standard proprietary door (as indicated) can be a cost effective alternative to a specialist manufacturer supplied door. However, issues such as the added weight of construction / certification using this approach must be carefully considered.
