

LPS 1673 Explained

What is it? LPS 1673 as a standard is intended to protect individuals and high-value assets from targeted attacks and violent smash-and-grab robberies. LPS 1673 provides the intended individuals an opportunity to get to a place of safety and call for help. These attacks are not intended to be subtle. Perpetrators are determined to complete their mission, whether it involves robbery or targeting an individual, without giving up. Unlike LPS 1175, LPS 1673 is an attack-rated certification, not security-rated.

Where Would Need an LPS-Rated Door? Typical applications for this range include locations at risk of targeted attacks against high-profile individuals such as politicians, celebrities or high-risk individuals. It can be suited for homes, offices and safe rooms in domestic properties.

What do I need to know? This standard, whilst it uses similar tools to the LPS 1175 standard, provides protection against a more violent and relentless attack. The table below shows the ratings available under this standard. The letter denotes the tool kit used and the number provides the seconds it achieved this rating, unlike LPS 1175, which is rated in minutes.

LPS 1673: Issue 1

What do Strongdor offer certified under LPS 1673?

Our attack rated steel doors provide additional precaution in a world filled with growing uncertainties. Physically tested and externally certified to international standards, these steel security doors are built to withstand the most punishing tests. Below are listed the current attack ratings offered by Strongdor under the LPS 1673 certification. Strongdor also offers **PAS24**, **LPS 1175** and **SBD** security doors.

LPS 1673
A300
ATTACK
RATED

A300:

This door range is available as single door-sets only, specifically designed for use in locations that would benefit from enhanced attack rating protection. The typical applications for this range include locations in more rural environments where response time may take a little longer, alternatively on a safe room, where another exit may not be available. Customisable with; tongue and groove and 150 RAL colours as standard with optional marine grade upgrades.

LPS 1175
SR2
SECURITY
RATED

B180E:

This door range is available as a single door-set designed for use in locations that would benefit from enhanced protection. The typical applications for this range includes leisure centres, schools, universities, housing association communal areas and general retail outlets. Customisable with; louvres, vision panels, a wide range of hardware and 150 RAL colours as standard.

Below are some upgrades available with your security door. For full information and all customisable options, please follow the links synced on your chosen rating.
