Exidor 297 Push Pad Single Point Panic Latch

The Exidor 297 is a surface-mounted rim latch suitable for both single and double door setups. It allows for a safe and swift exit during emergencies by simply depressing the pad, all while ensuring security against intrusion.

- ✓ Non-handed
- ✓ Surface mounted

Exidor 302 Knob Outside Access Device

The Exidor 302 comes with 3 keys and offers the flexibility of using a master keyed 40mm oval or euro profile cylinder. When locked, the mechanism disengages, enabling the knob to rotate freely. Upon unlocking, the knob, spindle, and mechanism engage, allowing the shoots or latches of the panic bolt/latch to be withdrawn from the outside. The knob stays engaged until re-locked.

- ✓ Non-handed
- ✓ Surface mounted

Exidor 296 Single Point Panic Latch

The Exidor 296 is specifically built for both single and double door setups. Activated by pushing down on the crossbar, it facilitates swift exits during panic scenarios. Additionally, it comes equipped with a standard adapter for compatibility with rim cylinders, allowing for outside access.

- ✓ Non-handed
- ✓ Surface mounted
- ✓ Closed arm design

Exidor 294 2 Point Panic Bolt

The Exidor 294 represents a refined and exceptionally practical panic bolt, tailored for use in both single and double door configurations. Its standard features include an automatic top trip mechanism and a conveniently cleanable floor socket. Additionally, the main body of the bolt is equipped with an anti-thrust device which prevents leverage of both the top and bottom shoot bolts from their sockets.

- ✓ Non-handed
- ✓ Surface mounted
- ✓ Closed arm design

Exidor 325 Lever Outside Access Device

The Exidor 325 is a sleek lever-operated outside access device compliant with the dimensional standards of the Equality Act 2010 and BS8300 – approved document 'M'. When locked, the lever/knob disconnects from the mechanism, rotating freely to deter unauthorised entry and potential damage. Unlocking engages the operator, spindle, and mechanism, facilitating withdrawal of the internal hardware's locking point(s) from outside the door. The lever/knob stays engaged until re-locking the mechanism.

- ✓ Non-handed

Exidor 0804 Extension Bolt

For doors that exceed 2440mm, the 0804 Exidor extension bolt is available.

Exidor 293 Push Pad 2 Point Panic Bolt

The Exidor 293 is a sophisticated and exceptionally practical panic bolt designed for single and double door configurations. It comes standard with an automatic top trip mechanism and a floor socket that's easy to clean. The main body is equipped with an anti-thrust feature, preventing any attempts to leverage the shoot bolts from their sockets, both at the top and bottom.

- ✓ Non-handed
- ✓ Surface mounted
