

Steel Door Seal Options

STEEL DOOR OPTIONS

TECHNICAL SPECIFICATION

75° Single Tee Fin Seal, Black

Strongdor P Profile Seal

Supplied as standard for all steel door-sets, Strongdor offers variable seal options for every specification.

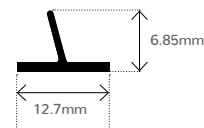

75° Single Tee Fin Seal, Black

75° Single Tee Fin Seal, Black

The Tee Fin Seal have been developed specifically as meeting stile seals in response to requests from steel door manufacturers to solve the problem of sealing meeting stiles of pairs of doors. This can be fitted to either the astragal or the leading edge on a pair of doors, and can be used as perimeter seals fitting into the rebate across the head and down both sides of the frame. The Tee Fin Seal is supplied with double sided backed PSA (pressure sensitive adhesive) tape and is suitable for internal and external doors.

Width 12.7mm
Height 6.85mm
Material Silicone

Strongdor P profile seal

Strongdor P profile seal.

P profiles (also known as P seals or P sections) consist of a round top section or bead, that provides excellent compression to create an efficient seal between the door leaf and jamb. This ensures that the maximum amount of surface area maintains contact at all times. The lower "tail" section the P seals gives a smooth straight surface to make installation simple and secure.

Material – EPDM
